

Explore new skills for new life circumstances.

The brain plays a major role in processing what you see. It also determines how you interpret visual information from the world around.

Stroke, acquired brain injury or other neurological events can change how you see and can affect your confidence to move through the world.

Regardless of how you acquired a neurological vision condition, readjusting to daily life with a change in vision can be a challenge.

Our O&M Specialists will assist you to understand your vision in relation to everyday movement, and work with you towards achieving your goals.

We provide individual services to make the most of your remaining vision and regain, maintain or improve your confidence to travel independently.

Supporting you to achieve your goals.

Common goals include:

- Consistent compensation for your change in vision by scanning
- Making the most of your remaining vision
- Confidence in using different ways to cross the road in a safe way
- Using public transport to get where you want to go
- Use of technology and other aids to make traveling easier.

We're here whenever you need us.
