

# Have your say about arm therapy after stroke

This survey is about arm therapy for people after a stroke. Your opinion about what is important when choosing arm therapy will help us improve how arm therapy is delivered.

## Is this you?

- **Adult living in Australia**
- Experienced a **stroke** in the **last 10 years**
- Had some **change to your arm function** from your stroke (even if this has improved)
- Have adequate English and cognitive skills to participate
- Have internet access (computer, tablet or phone)

**Scan here to participate**

## What does participation involve?

This study involves completing a survey which takes about 30 minutes.

You will be asked about your stroke and experience in arm therapy as well as some general questions about you. You will then be asked to choose between different types of hypothetical arm therapy programs.
